Mines and Mining--Activities in Ore Districts of Utah

HIGH GRADE IN NATIONAL CAMP THE NEW MACHINERY

Operators Produce Half-Million Dollars in Gold During Sixty Days.

ROCK CARRIES BIG VALUES IN METAL

Excitement Center of Nevada Attracts the Old Alaska Operators.

Special to The Tribune. NATIONAL, Nev., July 9.-Ushered

NATIONAL. Nev., July 9.—Ushered into existence about three years ago, in the midst of the late panic, and its progress seriously retarded during a large portion of last year and the early part of this year through litigation involving the principal property, the high grade copper camp of National, nestled in the mountains of northern Humboldt county, near the Oregon state line, has made such strides in the last sixty days as to make it the brightest star among the gold-silver camps, both old and new, of the state of Nevada. It is probably the one camp of all Nevada that is holding the attention of the mining world at present through its production and increasing activity and population.

The records of the United States mint at Carson City will show that the National district produced in the last sixty days buillen to the value of a half million dellars, the result of the operations on the property of the National Mining company of Nevada, including the Stall brothers' lease. Of the half million dellars of gold and silver sent to the Carson City mint in the last sixty days \$258,500 was produced during the month of June, an exceptionally good record for a comparative youngster.

The significant fact incident to the production of the last sixty days is that the builton was extracted only from what is termed first class high grade ore, ore that runs \$20 in gold and silver or better to the pound, and was reduced by two old fashioned small pan-arrasta mills, often referred to as "coffee mills," on account of their size and appearance, one being operated by the company and the other by the Stall brothers. An idea of the slow operated by the company and the other by the Stall brothers. An idea of them consumes twenty-four hours to reduce from 200 to 225 pounds of the precious rock. No ore of less than \$20 a pound is treated by the two mills. Any rock of less value is termed "second class," while ore assaying from \$20 to \$100 a ton is known as "mill dirt." A large tonnage of second class ore has been sacked and the mil

he in operation before the end of this month.

In all there are five leases, in addition to company work, being operated on the ground of the National Mining company of Nevada, namely, the Stall brothers lease, the Causton and Jarvis lease, the Chuston and Jarvis lease, the Hyde lease, the Atkinson lease and the Sankers' lease, the Atkinson lease and the Sankers' lease, the Last named being held by the officials of the Farmers and Merchants' National bank of Reno. The Causton and Jarvis, Atkinson and Hyde leases only recently started and are held by operators who amassed fortunes in placer mining in Nome and other camps of Alaska. They with a large number of former Alaskans who also did well in the far north, were attracted to National through the news of its extremely high grade ore. In fact, so many of the former "sourdoughs" have cast their lot with National that it is frequently termed "the Alaskan camp of Nevada." All of them have secured promising prospects in different sections of the district and seem deatined to materially increase their worldity possessions through their opera-

them have secured promising prospects in different sections of the district and seem destined to materially increase their worldly possessions through their operations in their new abode.

The encouraging results being obtained by the various operators are not confined to any one part of the district Important finds are being made throughout the entire district and the outlook for the camp as a whole is exceptionally bright. At present at least 300 miners are at work in the various properties, with the necessary attendant number of employees in the business houses of the town. Sales of mining ground at high figures are frequent occurrences. In short, the district is experiencing a boom that is growing daily. National is located seventy-one miles from the railroad, directly north of the town of Winnemucca, and is reached by automobiles and stages.

A committee of the Tintic Mine Owners' association, composed of B. N. Lehman, George W. Riter, Imer Pett and Harry S. Joseph has returned from Eureka, where a conference was held with the miners of that camp. The question up for consideration was a hospital for the district, and it is likely that the association will unite with the miners to hring about the installation of a hospital at Eureka, modern in every regard.

NOT WAITING FOR

Eagle and Blue Bell Shaft Work Good Springs Group of Eight Being Done by the Man-

In spite of the fact that the new equipment will not be shipped until the coming week, from which time it will take several weeks to install it and get it ready for work, the management of the Eagle and Blue Bell company at Tintic is making good headway in sinking the shaft. Every possible effort is centered on competition of the Eagle and Blue Bell company at Tintic is making good headway in sinking the shaft. Every possible effort is centered on competition to the shaft at present is 275 feet in depth on its way to the 1000 level.

Not long ago the drift on the 1000 level was continued from the large ore body to a point where this shaft is due to connect and a large station has been cut and raising to meet the shaft will be started in earnest by the first of the week in drifting to this station, the management encountered the west ore defining to this station, the management encountered the west ore channel which has not been explored in this portion of the property and as soon as possible this channel will be drifted on both ways.

It is in the eastern channel where the present big ore results are being gained to crowd production until the new shaft to rowd production until the new shaft to great the shaft will be a ready to take care of ore hoisting, but as it is, from sixteen to eighteen care of first-class rock are being sent to the Sait Lake smelters per month. The Eagle and the balance of the year should be productive of very gratifying results.

.015 .10

Thempson. Towle & Co. say: "We have had our attention called to the great increase in the consumption of copper in the manufacture of copper sulphate. It is largely used for the destruction of scale and insects in the orchards of the world. It is used more extensively abroad than in this country, particularly in France, in the vineyards, and it is claimed that the bulk of the Rio Tintoproduction is used for this purpose.

"One of the leading copper statisticians compiled figures upon this subject some years ago, and the figures then give 12 per cent of the world's production consumed in copper sulphate, but it is claimed that during the last few years growth in copper consumption has been increased, and it is figured that 200,000,000 pounds of copper per annum is a conservative estimate of the consumption at the present time, and the value of this consumption to the copper producers is apparent, for copper so used is forever lost."

The European statistics cover supplies eliveries, and stocks. These statistics

GOOD SUPPORT TO THE STOCKS YESTERDAY

James A. Pollock & Co., bankers and brokers, furnish the following, received over their private wire yesterday after-

over their private wire yesterday afternoon:
The New York Sun says: Some intereats, speculative or financial, of sufficient importance and adequate resources,
saw fit to extend vigorous and aggressive
support to prices in the stock market
this morning. The opening here was
lieavy, but showed very little change
from last night's close, and the selling
pressure was quickly overcome by the
activity with which offerings were absorbed and the aggressive way in which
stocks were bid up. Leaders in the recovery were the Harriman, St. Paul, Wabash preferred and Steel. The sharp
break in the last half hour yesterday,
which was a prompt response to the unfavorable crop report, seemed to be normal, but the reverse of the movement
this morning was capable of varying construction.

CLIFF DIRECTORS MEET IN RECENT CONFERENCE

Grant Snyder, general manager of the Cliff Mining company, was at his desk yesterday, after attending a directors' meeting in Chicago. The newly elected directors for the coming year are as follows: A. D. Thompson of Duluth, president; A. L. Kern, secretary and treasurer, E. M. MacVicker, F. D. Adams, G. D. Swift, Grant Snyder and W. F. Snyder complete the board, Mr. Snyder says that the directors were very well says that the directors were very well satisfied with the progress made by the company during the past fiscal year.

The Utah Ore Sampling company on Saturday released four cars from Utah and three cars from Nevada camps.

NEVADA COMPANY OLD GOLD DUMPS

DeLamar Leasing Company Is. Formed in Salt Lake on Saturday.

HALF-MILLION TONS OF ROCK AVAILABLE

Famous Old DeLamar Property Again to Assume Its Usual Activity.

the west is the DeLamar of Nevada, which was operated years ago by Captain DeLamar. He extracted something like \$17,000,000 from the property, and, like all old-time propositions, the metalone all the gold contents of the ore. Years of operation caused the accumulation of close to a half million tons of rock in the dumps, and a company, to be known PRODUCERS' STATISTICS as the Delamar Leasing company, was

The statistics of the Copper Producers association are based upon refined copper. They disregard the rough copper at the smeiters and refinerles, and in transit between them. The production figures include the copper, about 1,000,000 pounds per mouth, refined from serap and junk, but do not include the production of about 3,000,000 pounds per mouths by the concerns that confine their attention to business in scrap and junk.

The European statistics cover supplies and stocks. These statistics are the property, and the first into of 200 tons daily capacity will be placed in operation within the next tendary.

The European statistics cover supplies deliveries, and stocks. These statistics include more or less rough copper, along with the refined and "standard" and consequently are not compiled upon the same basis as the American figures. The report of stocks comprises copper in warehouse at British depots and in certain French ports. The copper at other European ports is not counted, though there is apt to be a considerable supply at Antwerp. Rotterdam and Hamburg. The copper arriving at those ports is apparently entered with the supplies and checked out at once as deliveries, the deliveries going partly to manufacturers and partly into warehouse.

Among the supplies reported in the European statistics is included the copper afloat from Chile and Australia, but the copper afloat from America, almost always as large in amount, is not included, although it is a part of the visible supply—Engineering and Mining Journal.

Where but a short time ago cattle pastured is today beautiful Federal Heights, a metropolitanized residential The ore and bullion report for Saturday, given by McCornick & Co., was as follows: Ore received, \$50,000; bullion shipped, \$150,000; total, \$200,000.

SILVER GAINS BY FIRST FURNACE IS VERY LONG STEPS

Bright Item in Utah Mining.

Silver on Saturday was quoted at 55% ents an ounce, the best price the white metal has brought for over two years. The most convenient book, usually, on which to hang any approciation in price is the business situation in the far east. and in the absence of any wing specifical-

and in the absence of any tring specifically accounting for the advance, this same theory will hold But whatever the cause, it is mighty gratifying to the producers of the metal, especially in Utah.

Utah stands fourth in the list of the silver-producing states of the minon, its production in 1908—this being the last year reported on by the United States goological survey—being 8,451,328 ounces, the value of which was \$4,479,299, or about 50 cents per ounce. Smelling circles estimate that the mines of Utah are producing at the rate of about 120,000 ounces of silver a day, so the advance in price of nearly 1 cent from Friday to Saturday means a net gain per day of \$1290 to Utah shippers.

One of the spectacular producers of silver at present is the Nipissing company of Cobalt. During June this company of Cobalt. During June this company soutput amounted to 350,658 ounces of the metal, so Cobalt is in a position to look the rise in price squarely in the face with a big degree of satisfaction.

NOT EASY TO GAUGE THE EASTERN MARKETS

James A. Pollock & Co., bankers and ockers, furnish the following, received yer their private wire yesterday after

Paine. Webber & Co, Letter, Boston.— The action of the market today was most encouraging. In the local market stocks are sold to a standstill. Prices have discounted the worst that can happen are the majority of stocks are selling at bargain prices. The railroad list will be weak at times on bad crop news, and the lack of buying makes it very susceptible to the bear drives, but we thin that local coppers have touched bottom and the only change from now on must be an improvement.

o an improvement.

Logan & Bryan Stock Letter, ork.—It was apparent shortly after pening that organized support was budgered the list, and the resistance. inforded served to stem the tide of liquidation. The attitude of foreigners winxiously awaited, and when Arbitridations appeared as buyers the short becrest proceeded to bid for stocks in a house appeared as buyers the short interest proceeded to bid for stocks in an
excited manner, with the result that substantial recoveries were recorded throughout the roster. Temporary support oftentimes serves to steady them for a period,
but usually the policy of permitting liquidation to run its course is eventually
pursued, and, therefore, as we seem to
be in the middle of an adjustment of the
credit situation, we would not allow ourselves to be misled by the action of the
list today, but would continue to adhere
to the principle of lightening lines on the
advances. The bank statement was very
much better than expected, but money
rates have displayed a hardening tendency, and it would seem that a further
contraction in the loan item is necessary,
and of course this can hardly be effected
except by liquidation unless foreign gold
can be secured. The outstanding short
interest is admittedly of large proportions, but stocks have gone from strong
to weak hands during the past few
months, and although public holdings
generally are not considered large they
are, nevertheless of sufficient extent to
result in liquidation on a good scale on
the drives.

Hornblower & Weeks Letter, Boston.—

Hornblower & Weeks Letter, Boston.—
There was very little trading in coppers
today. The opening was lower, but good
buying was in evidence and losses were
regained. Few stocks were offered, The
market acts well on weak spots. The
closing was steady, with a fair demand.
Gallagher says: The curb market very
quiet. There is a very large short interest here and if the shorts make any
attempt to cover you will see a sharp advance in all the better stocks, especially
Ray Consolidated, Goldfield Consolidated,
Miami, Chino and Nipissing. This Ray
Consolidated has been sold to a standstill. The market is bare of stock and
the shorts will be forced to cover at muti,
higher prices. Hornblower & Weeks Letter, Boston.

What Has Happened During the Week

FOR ANOTHER ASSESSMENT At the meeting Saturday afternoon of the directors of the Lower Mammoth Mining company, an assessment of 5 cents a share was levied, the assessment to be delinquent on August 15, the delinquent sale day being on September 7. This was considered the best solution to the present financial requirements of the organization, although the question of increasing the capitalization was one method suggested. It is not a very propitious time, however, for the sale of bonds or stock, and there is the chance that the present assessment will bring the management to sufficient ore to allow the company to pay its operating

MONDAY—Mines of Utah generally onstrated ore deposits so that churn drills were closed down on account of the Fourth. Discussion of the smelter smake question indulged in. Combination Fraction mill at Goldfield soon will resume operations. Arizona and Mexico records as mineral producing territories reviewed. George Wingfield's purchase into the Nevada Hills company was not entirely fuck.

MONDAY-Mines of Utah generally onstrated ore deposits so that churn drills dividual copper producer in the world. Copper surplus reduced when compared with the May statistics. Producers' association releases the copper figures for the month of June. Inspiration Copper management brings another churn drill hole into ore northwest of the Colorado

shaft. George Wingfield's purchase into the Nevada Hills company was not entirely luck.

TUESDAY—Conference of copper magnates reported abroad. Crown Point company files its annual report with stockholders. Report made by the geological survey on the Utah and Colorado coal fields. James Quinn will take the position as superintendent of the Eight will have first unit of plant in company will meet Saturday next to dispose of the present financial difficulties. Chino Copper management connecting up dem-

NOW BEING LINED

Increase in Price of Metal Is International Plant Is Getting United Metals Selling Companie Is Along to Point Where Business Begins.

The management of the International Smelting and Refining company of Teoche county he now furnishing the first reverberatory furbace with its initial coating of silica, and another furnace is nearly ready for the same treatment. The third furnace is being brought to a near-completed state, and everything looks as if the company will have these three furnaces in shape for operation before the end of the present month.

It is likely that the Utah Consolidated company in a day or two will have its agreed tonnage safely tucked within the ore bins of the American Smelting and Refining company at Garfield, from which time on shipments via the new tramway to the ore bins of the International company will be in order. The tramway at present is transporting ores to the terminal bins in Toocle county, shipments being made to the Garfield plant from that point. The International plant was inspected during the past week by General Manager E. P. Mathewson of Butte.

Nevadas in San Francisco.

on Saturday Drops Its Wil Copper Price.

NOW ON SAME LEVEL

Move Likely to Stimulate Bushook ing Which Will Work Off Surplus.

crests was enlivened by a signific Metals Selling company. nown organization cut its asking pr or electrolytic copper from 13 to cents a pound, thus reaching the sa-level of prices with its competitors. The information was conveyed west via 1 Pollock wire system yesterday morn from Boston, the act being termed a lowering of the umbrella which to United Metals Selling company has be holding over the copper markets for past several months. Sales of the me at the reduced order are reported who

colding over the copper markets for the cost several months. Sales of the meint in the reduced price are reported, which means that the surplus is more likely to be reduced quickly.

The United Metals Selling company the largest concern of its kind in the world. The company is the selling agen for the Amalgamated Copper and allie interests. For some time past its asking price for copper has been higher that its competitors, and as a consequence opper has been piling up on the company while competitors have been selling the output two or three menths alread.

This action gives a rather clear visit of the copper situation, demonstrating that as far as the moment is concerned there is no probability of an agreemen between the contending interests. I looks as if the Amalgamated interest are determined to contend with the weapon of cheap metal for the purpose of establishing once for all the respective mertis of the various producers be fore arriving at the point where negotiations can be undertaken for some sort oan agreement.

a agreement.
There are a great many copper contess which are unable to keep to east above water with 125 or 12-peper. The reduction of prices is been slaughter many innocents before any of judgment is reached. The sumer, however, has displayed good ju ment so far in biding his time in expectation of cheaper metal. Still i ther declines in price may occur dur the summer, for there is no sign now an agreement being reached until The coming steps in the contest will watched with an intense interest.

THE MODERN OFFICE

Must be equipped with modern a ances, especially in the line of books and loose leaf books. We can supply the most complicat needs in this line.
